SUMMARY

Computer Science graduate (Cum Laude) with production-grade full-stack applications spanning frontend, backend, and database layers. Built the production frontend and backend-integrated systems for Nudgine (Next.js 16, React 19, MongoDB), a Next.js + Supabase church membership system serving 3,000+ live records with Gemini API integration, and a full-stack time tracking SaaS with VS Code and Chrome extensions. Experienced with authentication/security hardening (TOCTOU-safe token handling, RBAC, brute-force protection), subscription/billing flows, and REST API design.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL

Frontend: React 19, Next.js 16 (App Router, Server Components), Tailwind CSS 4, Shadcn UI, HTML5, CSS3

Backend & Databases: Supabase, PostgreSQL, MySQL, MongoDB (native driver, TTL indexes, atomic operations), Flask, Node.js, REST APIs, WebSockets

Auth & Security: JWT authentication, RBAC, bcrypt, Google OAuth, Cloudflare Turnstile, TOCTOU-safe atomic operations, distributed rate limiting, progressive brute-force backoff, reCAPTCHA v2

Payments: Stripe (Checkout, Billing Portal, Webhooks, capacity billing, subscriptions)

AI & LLM: Gemini API, prompt engineering, LLM report summarization, natural language Q&A over structured data, OpenAI GPT-4.1-nano integration

Tools & Cloud: Vercel, Git, GitHub (Projects, CI/CD via GitHub Actions), pnpm + Turborepo monorepos, Figma, Zod, Recharts, Tiptap

PROFESSIONAL EXPERIENCE

Frontend Developer / Software Developer | Nudgine LLC

Jun 2026 - Aug 2026

Alpine, Utah, USA (Remote) · Contract · Real-time AI meeting guidance software

- Redesigned and shipped the Nudgine marketing/landing experience end-to-end (animated hero, aurora background, sticky frosted-glass navbar, use-cases marquee) and extracted a shared component library reused across 10+ marketing and auth pages, using Next.js 16, React 19, TypeScript, and Tailwind CSS 4.
- Built the /pricing page (usage-based Pro-plan slider, animated plan comparison table, billing FAQ) and 8 additional SEO-optimized marketing pages, each with full SEO metadata and structured data.
- Rebuilt the Login, Signup, and Auth Modal on a shared authentication foundation with Google OAuth, invisible reCAPTCHA v2, and layout-stable animated transitions; implemented the sitewide typography system.
- Delivered a production-ready password reset and account-security system spanning 5 API routes and 3 UI pages with SHA-256-hashed reset tokens, MongoDB TTL-based expiration, TOCTOU-safe atomic token invalidation, and transactional email; authored 25 passing integration tests.
- Engineered a progressive exponential-backoff brute-force protection system (10s → 1min → 5min → 15min escalation), extending shared rate-limiting infrastructure with configurable, validated delay schedules.
- Built the post-signup onboarding flow (server-side plan selector routing users into Stripe Checkout, contact-sales, or the free workspace) and resolved Stripe billing issues, including checkout email prefill and toast-based billing-success redirect.
- Built the public legal pages, a multi-jurisdiction Data Subject Access Request (DSAR) form, and the Contact Us page with category-based routing; ran WCAG accessibility, keyboard-navigation, dark-mode, and cross-device audits (44px touch targets) on every PR.

- Architected and shipped a production membership system in Next.js (App Router), TypeScript, and Supabase, managing 3,000+ live member records across a 40+ field normalized PostgreSQL schema.
- Built two Gemini API features: an AI report summarization tool for filtered member exports, and a conversational Q&A interface for non-technical admins to query membership data in plain English.
- Implemented server-side RBAC via Next.js Middleware, verifying Supabase JWT sessions on every request and routing Admin, Staff, and Member users to separate portals with no client-side enforcement gaps.
- Integrated Cloudflare Turnstile bot protection into the authentication flow to mitigate automated login/registration abuse.
- Developed a configurable reports module with live search, multi-criteria filtering, toggleable columns, and one-click CSV export, reducing reporting time by approximately 80% versus the previous spreadsheet-based process.
- Deployed to Vercel with CI/CD on every push to main; migrated 3,000+ historical records to the new schema with zero data loss during go-live.

- Designed the eTanom Planter's Interface, a reforestation platform, with responsive layouts for web and mobile covering 8+ end-to-end flows: OTP onboarding, proof-of-planting uploads, earnings tracking, withdrawals, and in-app messaging.

PROJECTS

- Live production app: three-tier RBAC, dual-portal architecture, AI-powered report summarization and natural language Q&A via Gemini, and configurable member reports with CSV export.

- Full-stack time tracking platform with automated activity capture via VS Code and Chrome extensions; focus score engine, 52-week contribution heatmap, multi-workspace support, and multi-currency invoice generation with PDF/CSV export.

- Multi-role clinic platform with server-side role enforcement, real-time cross-role notifications via Flask-SocketIO, Cloudinary file uploads, and automated credential emails.

- Co-authored a facial recognition pipeline (MTCNN for detection, LBPH for recognition) evaluated on a 20,500-image dataset under varying lighting; achieved up to 99.6% detection accuracy.
- Built a Flask web application for real-time visualization of recognition results and model configuration.

- Trained a CNN on a custom 6,000-image dataset to classify four hair types; achieved 79.67% test accuracy over 20 epochs with minimal overfitting.

EDUCATION

LEADERSHIP

MSU-IIT CS Society, Secretary - 2024 - 2025

Managed records and coordinated events for a 100+ member student organization. Awarded Certificate of Student Leadership.
