SUMMARY

BS Computer Science graduate with production experience building and deploying full-stack web applications and AI-powered internal tools. Shipped a live Next.js + Supabase membership system with RBAC, multi-portal architecture, a 3,000+ record PostgreSQL database, and Gemini API integration for natural language data access. Seeking a role at the intersection of AI development and practical business tooling.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL

Frontend: React, Next.js (App Router), Tailwind CSS, HTML5, CSS3

Backend & Databases: Supabase, PostgreSQL, MySQL, Flask

AI & LLM: Gemini API (Google), prompt engineering, LLM-powered report summarization, natural language Q&A, AI workflow integration

Tools & Cloud: Vercel, Git, GitHub, Figma, Jira

Concepts: RBAC, JWT authentication, REST APIs, real-time events (WebSockets), data modeling, CSV pipelines, CNN image classification, CI/CD

EXPERIENCE

United Church of Christ in the Philippines – Iligan

Iligan City, Philippines

Full-Stack Developer & AI Integration (Volunteer)

Jul 2025 – Present

- Architected and shipped a full-stack membership management system using **Next.js (App Router), TypeScript, and Supabase (PostgreSQL)**, serving a live organization with 3,000+ member records.
- Integrated the **Gemini API** to build an AI-powered report summarization feature — admins generate a filtered member report and receive a natural language summary of demographics, trends, and anomalies, eliminating manual data interpretation.
- Built a **natural language Q&A interface** powered by the Gemini API, enabling non-technical admins to query membership data conversationally (e.g. “How many active members are in Zone 3?”) without writing queries or navigating filters.
- Implemented **role-based access control (RBAC)** via Next.js Middleware — intercepting every request server-side, verifying Supabase JWT sessions, and routing admin and member users to separate portals with no client-side enforcement gaps.
- Built **two fully separate user portals**: an admin dashboard (member directory, AI tools, reports, settings) and a self-service member portal where members can view and update their own profiles.
- Designed a **40+ field normalized member data model** in PostgreSQL covering personal info, family background, church records, educational history, and ministry involvement.
- Developed a **typed data access layer in TypeScript** with batched pagination (1,000-row chunks) to reliably fetch all records beyond Supabase’s default query limit.
- Built a **configurable reports module** with live search, multi-criteria filtering (status, birth month, wedding month), toggleable column visibility, and one-click **CSV export** — reducing manual reporting time by 80%.
- Implemented **automatic field computation** on member forms: age and age group derived from birthdate, years married from wedding date, and geographic zone inferred from home address via keyword matching.
- Built a **member account linking panel** enabling admins to connect Supabase auth accounts to member records manually or via automatic email matching in batch.
- Exposed a **secure server-side API route** using Supabase’s service role key to list unlinked auth users — keeping admin credentials off the client.

- Deployed to **Vercel** with production environment variables secured via Vercel project settings and continuous deployment on every push to main; migrated and validated 3,000+ historical records with zero data loss during go-live.

Sikai Inc.

UI/UX Design Intern

Iligan City, Philippines

Jun 2024 – Jul 2024

- Designed the *eTanom* Planter's Interface — a reforestation platform for community planters, delivered with responsive layouts for both web and mobile.
- Mapped and prototyped 8+ end-to-end user flows: multi-step onboarding with OTP phone verification, order accept/decline with structured decline reasons, image-upload proof-of-planting, earnings tracking with withdrawal flows (GCash, Maya, bank), and in-app messaging.
- Built a full WCAG-compliant color system with documented contrast ratios across 9 shade levels, ensuring AA/AAA compliance on both light and dark surfaces.
- Delivered developer handoff documentation with annotated components and interaction states (default, hover, active, disabled, error, success), reducing clarification rounds for a 4-person engineering team.

PROJECTS

Church Membership Management System + AI Layer

uccpiligan.vercel.app

Next.js · TypeScript · Tailwind CSS · Supabase · PostgreSQL · Gemini API · Vercel

2025 – Present

- Live production app serving UCCP Iligan — features RBAC, dual-portal architecture, configurable reports with CSV export, and Gemini API integration for AI-powered report summarization and natural language member data Q&A.

Clinic Management System

github.com/edaprgs

Python · Flask · MySQL · Flask-SocketIO · Cloudinary · Flask-Login

2023 – 2024

- Built a multi-role clinic management system (admin, doctor, medtech, receptionist) with role-based authentication using Flask-Login and a custom `role_required` decorator.
- Implemented real-time cross-role notifications using **Flask-SocketIO** (e.g. receptionist-to-doctor appointment alerts, doctor-to-medtech lab requests).
- Integrated **Cloudinary** for file uploads, **Flask-Mail** for automated credential emails, and a full audit log of all user actions via MySQL stored procedures.

CNN Hair Type Recognition

github.com/edaprgs

Python · TensorFlow · Keras · scikit-learn

2024

- Built and trained a CNN to classify 4 hair types (coily, curly, straight, wavy) on a custom 6,000-image dataset curated from Kaggle, Google, and Pinterest.
- Applied data augmentation (rotation, zoom, flip, brightness adjustment) to improve generalization; achieved **79.67% test accuracy** over 20 epochs with minimal overfitting.

eTanom — Planter's Interface

[Figma Prototype](#)

Figma · UI/UX Design · WCAG · Responsive Design

2024

- Designed the planter-facing interface of a reforestation platform with responsive layouts for both web and mobile, covering 8+ end-to-end flows, a 9-level WCAG-compliant color system, and full developer handoff documentation.

EDUCATION

Mindanao University – Iligan Institute of Technology

Iligan City, Philippines

BS Computer Science, *Cum Laude*

2021 – 2025

LEADERSHIP

MSU-IIT CS Society, Secretary

2024 – 2025

Managed organizational records and coordinated society events for a 100+ member student organization. Awarded Certificate of Student Leadership.
